**In The Name of Allah
The Most Beneficent The Most Merciful**

“Say! He is God, the One!
The Eternally Besought of all!
He does not beget, nor is He begotten,
And there is nothing comparable to Him.”

Gratitude to Allah

We pay our special gratitude to Allah Almighty who is sole owner of this universe and helped us whenever we prayed for His assistance. He has blessed us with what we were looking to accomplish and helped us out by holding our hands during hurdles. We have no words to express our deepest feelings of gratitude to Almighty, Compassionate, and Supreme Allah. We thank Him for what we have achieved and consider each and everything as a gift from Him. Though the element of luck cannot be ruled out. But Allah provided us the faith and determination to grasp the opportunities for the completion of a successful project.

Acknowledgement

We thankfully dedicate this project to those people who were involved in this project and guided us with their supreme efforts. We would like to express our intense sense of respect to our supervisor and mentor Mr. Abubakar Siddique, for his relentless guidance and steady help during the project. His in-depth knowledge on a broad spectrum of Website and mobile development and designing has been extremely beneficial for us.

His willingness to give his time so generously has been very much appreciated. We are thankful to the Almighty for giving us a counselor like him.

I would like to express my appreciation to the Dean, School of Science and Technology, Dr. Abdul Aziz Bhatti and also to the Chairman of Computer Science Department, Dr. Malik Tahir Hassan for their support and help towards my graduate affairs. My acknowledgement also goes to all the technicians and office staffs of School of Science and Technology for their co-operations.

Last but not the least, our deepest gratitude goes to our parents for their love, support and sufferings during our studies and project. We wouldn't be able to reach this point without their prayers and encouragement. Thank you very much.

Preface

Life has become extremely fast. In this era if we had a personal assistant life would be so easy. Sending an automated SMS to wish birthdays, reminding us of important meetings and calculating our travel times.

Making sure we sleep on time. Every one of us desires to have such an assistant. With the advancement in technology we can put an assistant in every person's mobile phone.

Hence the purpose of this project is to empower every one and give them the assistance they need. No need to be rich and pay for a assistant instead you can get the same functionality in palm of your hand, no cost, no hassle, no trouble. Simplifying life is what we want to do.

1.1 INTRODUCTION

1.1.1 PROJECT DEFINITION

Personal Assistant

What is Personal Assistant?

Normally a personal assistant is for a businessman or an executive. They help them with their daily life. Managing their schedule, taking notes, making reminders, receiving and sending messages on their behalf. In short a personal assistant is someone, which relieves its employer of managing his or her personal, private and business life to some extent.

But the main problem is not everyone can have a personal assistant, but we do know that almost everyone has a smartphone. Hence harnessing the abilities of a smartphone our personal assistant runs and fits in a persons palm. Anyone can have a personal assistant now and feel special.

Our app can be downloaded from the application store. Once stored the user will need to set it up for initial use. The assistant takes over from there. From reminding you about an important event to putting your phone on silent when you are busy or sleeping and also auto replying when its your wife so she stays worry free.

For This Application, we will provide following capabilities:

- Personal Module
- Business Module
- Social Module

1.1.2 Personal Module:

This part will include the personal activities that will be controlled by smart phones like enabling do not disturb mode, which will make sure the user is not interrupted by any call or SMS etc.

1.1.3 Business Module:

In business module we manage meeting scheduling, with alerts on leaving for destination to telling the other party that a meeting has been schedule.

Personal Assistant

1.1.4 Social Module:

A personal assistant cannot be personal without a social aspect. It manages your social life; with handling Facebook and sending auto SMS to others on social occasions.
