ACKNOWLEDGEMENT

I am thankful to **ALMIGHTY ALLAH** who gave me courage and passion and prayers of my parents and teachers to achieve the goal that was necessary for the degree. Although it was not an easy task, with the useful direction, kind supervision and co-operation of **Mr. Imran Saleem**, it became easy for me to complete the research work. I am really grateful to my Project Supervisor because of his profound interest and encouragement throughout the project work.

I would like to acknowledge **Dr.NaveedYazdani**, Chairman, School of Professional Advancement, UMT Lahore, for encouraging and providing me all the facilities throughout the project.

Last but not least, I extend my sincere appreciativeness and thankfulness to my Family for their incredible encouragement. Their love and support means a lot to me.

ABSTRACT

Software applications and the users of this application are growing day by day. There is almost every field of life where software applications are essential. One of these fields is dentistry where patient record management is very important.

Keeping this space in mind, we decided to develop a system for dentists to keep their patients history record.

INTRODUCTION

INTRODUCTION

1.1 Project overview

We designed a project that manages the basic needs of the patient and doctor that are being provided by the Dental Management system. This is an online system through which the patient will get the maximum benefit. The patient can view appointment time and book the appointment as well as the live chat is available for patient.

1.2 Problem statement

In today's world we are basically working on things that would ultimately benefit the mankind. Nowadays we are facing many issues related booking timing of doctors. The patient has to physically go to dentist clinic. Therefore, a new system is needed that would provide patient online facility for consultation with booking. System will provide facility to patient for reservation by a secure method and complete identification of the customer. Vendors are also being verified before registration. The customer can provide feedback for the services rendered. Payment would be made through credit card.

The people who are impacted by our dental management system are our stakeholders who are as follows

- Patients
- Staff in clinic
