Abstract

Online auction is a type of changing pricing method that is performed on an internet base platform. According to the weakness of the low-automation and advantages of the multi-agent, this project introduces a mechanism of single agent product selling and group-buying which is known as online auction system. This project also covers an automated negotiation system, negotiation strategy, a system frame and provides the implementation algorithm of singular selling & group-buying online auction through the auction flow. This project is about posting, buying & selling items and provides detailed implementation of online bidding is based on auction's concept theory and also gives real life implementation.
