Contents:

Introduction:	Page No.s
1) Project Title and Description.	1
2) Project Feasibility.	2
3) Aims and Objectives.	2
4) Problems and Issues.	3
5) Design Aspects	3
6) Scope of Work.	4
7) Target Group and Location.	4
8) Demographic study of Gujranwala	5
9) Existing hospitals in Gujranwala.	6
10) Reason of selection.	6
Literature Study:	
1) What is Hospital?	8
2) Hospital Zones and Major Departments.	9
3) Pediatric Hospital?	14
4) Impact of Hospitalization on children.	14-15
5) Healing Environment.	16
6) Conclusion.	17
Pediatric Hospital Planning:	
1) Pediatric Specialization.	19
2) Children in Hospital.	19
3) Physical and Psychological needs of children in hospital.	20
4) Design Issues.	22
5) Role of Color.	24
6) Effects of Color on health.	25
7) Conclusion.	26

Case Studies:

- | | |
|--|----|
| 1) Lahore Children Hospital. | 28 |
| 2) Phoenix Children Hospital Arizona, USA. | 32 |

Site Analysis:

- | | |
|----------------|----|
| 1) Location. | 40 |
| 2) Conclusion. | 41 |

Proposed Project Building Program:

- | | |
|---------------------------------------|----|
| 1) Principle departments of Hospital. | 43 |
| 2) Medical Services. | 43 |
| 3) Medical Support Services. | 49 |
| 4) General Support Services. | 50 |

Final Design Project:

- | | |
|-----------------|-------|
| 1) Master Plan. | 53 |
| 2) Floor Plans | 54-55 |
| 3) 3-D Views | 56 |

ACKNOWLEDGEMENTS:

I extend my deep appreciation to various individuals working in different spheres of life, which regardless of their own interest helped and inspired me in understanding the complexities of this project.

Thanks to my teachers Ar. Ilyas Malik and Ar. Sarmard Salluddin for guiding me where ever I found difficulties during this time.

My gratitude to my external advisor Ar. Tariq Sandhu and Ar. Imran Hussain who was always available for discussion and for the precise suggestions.

A family like I have has been a great support to handle all my tempers and mood swings occurred during this phase. Without them I could've ended up as an explosion of flesh and bones in no time.

ABSTRACT

The Study of man and his nature shows that the desire for a healthy body and mind ranks his among his basic instincts, along with shelter, protection and desire for food, the process of which starts from his very childhood.

Hence it becomes important to design spaces for children where they need it most i.e. in times of distress, pain and injury to aid in their mental processes of growth, reasoning etc. to eventually become bright human beings and contributing factors to the society.

Description:

Children's are the integral part of a society and also future of the society. They are the foundation of every development that takes place in nation. The children needs to be provided with sufficient facilities and a better living environment. A good mental and physical health leads to a well developed Child, allowing them to reach their full potential.

Pakistan is a developing country and here health care facilities are insufficient especially in children's hospitals. There are 2,3 Children's Hospital in PUNJAB which are over-crowded, besides that the facilities provided in them are insufficient and lack in functional efficiency. Basic requirements of Patients care, safety and clean environment are not being fulfilled. Hence they do not meet the international standards of quality health environment. Hospital is a place for healing but the environment in existing hospitals are traumatic and instead of healing causes delayed stays and in the result further crowding.
