Introduction

This is a web application which can be utilized in any educational institution to perform the basic operations through software instead of manual work. So, the main purpose of the project is to produce a management system for educational institution and to enhance interconnectivity of sub-branches in a more effective way.

This project is intended to create Campus Management System (CMS) that will help to interconnect all the branches, students and teachers' data and financials records etc.

CMS will provide the solution to a number of issues like

- Student Record Management
- Teacher Registration
- Computerized Reports
- Student Result
- Date Sheet
- Teacher & Parent meetings schedule

The objective of this project is to manage the entire system of an educational system through a network comprised of Teachers, students and different records, like Fee records and, Session records, and attendance records. Furthermore this network will also manage the parents-teacher meeting Schedules.
