Baba Dioum, 1968

Abstract

My thesis is to bring an idea of modern zoo by reviving an old dead Forest. Through my study of this subject, I intent to design a zoo cum safari by introducing a part of zoo 360 while keeping in mind about the ecological system and zoographical display of exhibits. In order to prevent the animals from being extinct. I am planning to educate public as well as by conserving the species, I am design s space for people around the world. A vet care center is also introduced to the site for the better care of animals and their proper nourishment.

A wild life sanctuary depicts the deep relation of wildlife to their home which is break due to urbanization. By the increase of urbanization today. Man is losing its most essential interaction with the natural world. My interest is to create a balance between animals and nature which is not properly developed in our country. Animals required a habitat of their type; to survive it is necessary to give them an atmosphere where they can breed.

Acknowledgement

This thesis project would never been possible without the support of my family who support me to choose the topic and encourage me at every stage. My deepest gratitude to RAMEEL RAZA for being so patient, without whom I would never have had the strength to carry on, he encourage me and gave me the confidence whenever I needed it the most.

My special thanks to all those who gave me their precious time for discussion;

Sir.Ilyas Malik

Sir.Usman Buksh

Dr. Saima Gulzar

Sir Wasim Khan (PU)

Irfan Doogar (Deputy Director Changa Manga)

Mr. Zafar Shah (Director of Lahore Zoo)

Chapter1

INTRODUCTION

BACKGROUND

The whole idea revolves around an attempt and an experiment where the idea of being more natural and less architectural will be experimented. Architecture evolves from nature so how can a harmony be created among the existence of both is something which this thesis is going to actually concentrate on. The elements of landscape are as interdependent and interconnected as could be possible.

My thesis will focus on the combination of both and attempt to create an environment which is architecturally as natural as possible. Built spaces as open as nature itself and enclosed environment as covered as the hidden treasures of nature itself. The landscape will incorporate immersion habitats whereas built forms and architecture will be catered to under the caption of zootopian concept.
