Acknowledgement

We started this project with scratch by just our courage and knowledge base. So it was not possible without the kind support of Sir Abu Bakar and Sir Asif Subhani. So we all are grateful to our project supervisor and co supervisor.

We have no words to say thanks and wishes to University of Management of Technology and its Computer Science department for their guidance and help as well as for providing necessary information and other resources such as library, lab ,internet and all of the things and services regarding the project & also for their support in completing the project.

We specially would like to show our thanks to my parents & member of Computer Science department and loyal and experienced friends in this area of studies for their kind co-operation and encouragement which help us in completion of this project.

We would like to express our special gratitude and thanks as a team to Zuhaib Arshad Chaudhery for giving us such attention and time and work.

Our thanks and appreciations also go to our team members in developing the project and people who have willingly helped us out with their abilities.

Thank You...!

1. Introduction

1.1 Project Overview

We are going to develop a Mobile and Web based application. As name shows this is a food related application for simple mobile and web users. So that people can find food and good restaurants by using this app.

By using this application user can discover new food restaurants, find different food items across the city, across his/her location via online or mobile app. Users of FoodInn order cuisines from more than 20 restaurants in the Lahore city. Users have to enter the city and relevant block of city in which they are wanted to search restaurant or cuisines. Application will automatically display all the best deals and restaurant which are registered in the application. After searching food items user can place orders, take home delivery service and make reservation of table in respective restaurant.
