School Examination Management System

➤ *Requirements*

A management system is the framework of processes and procedures used to ensure that an organization can fulfill all tasks required to achieve its objectives. So, school examination management system will required following tasks to be performed efficiently:

- Keep record of all students of board classes
 - Name, father name
 - Subjects and group (Science, Arts)
 - Marks in previous board class if any
- Submit admission form via web page
- Admin can edit the student record if there's any mistake i.e. in name, father name etc.
- Search complete record of each students all exams taken
- View results and print
- Export results to certain file formats:
 - Excel
 - pdf
 - etc.
- General stats about exams; for example:
 - No. of students appeared
 - Passing ration
 - Gender wise classification

Introduction to the Document:

We are moving very fast day by day towards the digital world. As we know the needs of human's beings are increasing due to fast and new technologies have been introduced. Especially the different industries and offices need fast and better technology for their good performance. The electronic examination system method is of cheap cost as compare to paper work. Electronic and computerized system made great progress in different fields specially in industrial areas and offices, like apart of B.I.S.E Lahore management system, use internet to alter students about their exams updates, different schools and education institutions used new technological management system or any latest event. In fact there is no sphere of human Endeavour that has been not been affected by computer system revolution, Not only it is affordable for any kind of organization it is the fast way to convey their message to students. So B.I.S.E Lahore will use the advantage and manage their services of organizations. Our System software will basically sending information to one or many Group of students, sending different information about the exams, roll no. slips, date sheet, print gazette etc. Basically, a management system is the framework of processes and procedures use to ensure that an organization can fulfill all tasks required to achieve its objectives.
