

# **THESIS REPORT**

## **A unified model for software functional testing**

**SUBMITTED TO:**

SCHOOL OF SYSTEMS AND TECHNOLOGY

IN PARTIAL FULFILLMENT OF THE REQUIREMENTS FOR THE DEGREE OF

**MASTER OF SCIENCE (SOFTWARE ENGINEERING)**

**SUBMITTED BY:**

**Jawad Abbas**      15007114005

**Supervised By:**

Mr. Amjad Hussain Zahid

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

## FINAL APPROVAL

It is certified that the research work presented in this thesis entitled “A Unified Model for Software Functional Testing” was conducted by Jawad Abbas, under the supervision of Mr. Amjad Hussain Zahid at University of Management and Technology, Lahore, Pakistan. It has been completed in September 2017 to fulfill the requirements of the degree of MS Software Engineering.

### 1. Supervisor

Mr. Amjad Hussain Zahid,  
Assistant Professor,  
School of Systems and Technology,  
University of Management and Technology, Lahore

---

### 2. Director Graduate Studies

Dr. Muhammad Shoaib Farooq,  
HEC approved PhD Supervisor,  
Associate Professor,  
School of Systems and Technology,  
University of Management and Technology, Lahore

---

### 3. Dean SST

Dr. Shaukat Iqbal,  
Professor,  
Chairperson, Department of Informatics and Systems,  
School of Systems and Technology,  
University of Management and Technology, Lahore

---

## DECLARATION

I, Jawad Abbas ID# 15007114005 Session 2015-2017, hereby certify that this thesis is being submitted in partial fulfillment of the requirements for the MS degree in Software Engineering. This thesis is my original work and the data/material presented here in has not been used for the acquisition of any other degree from any institution.

Jawad Abbas

## **ACKNOWLEDGEMENT**

This Study has been carried at the school of systems and technology, University of Management and technology, Lahore. I am thankful to the institute for giving me the opportunity and providing me the research resources to carry out this study. I extend my warmest thanks to my supervisor, Mr. Amjad Hussain Zahid from University of Management and Technology, for his valuable feedback, patience, proficiency in the software testing research and providing the support when and where needed.

Now, I would like to say thanks my parents, my wife and friends for their support and encouragement to complete this endeavor. There are numerous other people who participated in this study. To all of them, I want to express my sincere thanks.

## **PREFACE**

This thesis was prepared as a partial fulfillment of the requirements of acquiring the degree, Master of Science in Software Engineering MS (SE), in the School of Systems and Technology (SST) at the University of Management and Technology (UMT), Lahore, Pakistan.

This research document contains five chapters. In the first chapter, the introductory information and content has been written. Second chapter purely includes the Literature Review related to the topic. This is describing the previous work done in this area. Research Methodology has been discussed in third chapter which describes the method of research, overview of tools and techniques used in this research. After the Research Methodology, chapter 4 discusses the proposed framework. It has been described that how this unified model for software functional testing has been built and tested for validity. At the end, conclusion and future work chapter (5<sup>th</sup> Chapter) finalizes and provides the outcome of this profound research.

## **ABSTRACT**

The development of large software systems is a challenging and error prone process. To guarantee extraordinary quality, it is essential to examine software at different stages. Software testing is the dynamic parts of Software Development Life Cycle (SDLC). However, the software testing field has various issues like effective test cases generation, assembling of test cases, which require time and cost of testing. Software testing needs a guidance model for test selection and authentication. Model-based functional testing compares the SUT against defined test model. This process consists of generation of test suite against the test model, execution of the suite, and comparison with expected one. This thesis study has debated on the basics of testing briefly, recent advancements in various software testing strategies, techniques and automations models with respect to functional testing. In resultant, this research has introduced a unified testing model, which is based on the characteristics of object-oriented testing model and data driven testing methodology. In this study, it has been tried to find a solution to test web application by using model-based testing approach. Due to several benefits, Model-based testing approach has been chosen as a guideline. Selenium tool is used as a test Automation software. Framework has been written in pay Charm IDE supported by python language. Test application named 'Library Reservation' has also been developed in this thesis for the implementation of developed model.

# **Chapter 1**

## **Introduction**

## **CHAPTER 1**

---

### **1. Introduction**

Complex Information systems are now vital part of daily life. Every information system consists of two kinds of measures, namely software and hardware. Development of large and complex software is always a challenging and error prone procedure and errors may occur in any phase of software development. To make sure extraordinary quality of software, it is compulsory to verify the software at different stages. The complex software systems need more detailed verification before implementation. The software quality can be explained as collection of features and properties, which define advantages and disadvantages of software.
