Acknowledgement

We truly acknowledge the cooperation and help make by Dr. Nabeel Amin, Dean School of Textile and Design, University of Management and Technology. He has been a persistent source of guidance throughout the course of this project. We would also like to thank MR. Muhammad Awais for his help and guidance in understanding the technology of work aids for productivity improvement. We are also thankful to our supervisors and teachers, whose silent support led us to complete our project.

(Signed)

Abstract

This research work is about use of work aids for productivity improvement in Sewing. In this project, we enhance the productivity, by overcoming the time wastages and an effort to find their causes and remedies is established.

In this project, we have visited following departments to complete our research:

- Sewing Department
- IE Department

Keeping our object in mind, we started our analysis in sewing department and IE department. The basic objective is to highlight the major wastages arises in the stitching process of a garments in an industry and try to find their remedies, as these problems sometimes play a vital role in order rejection. Getting rid of these wastages will enable us to make a good product which enhances productivity. A successful organization always focuses on good quality product and it can only possible by eliminating the faults of product.

Our project's main objective is to enhance the productivity, by overcoming the time wastages and try our best to find their causes and remedies. In this period of project, we only focus on the automation of the machines for saving time.
