Dedication

This project is dedicated to our parents and teachers, those taught us that the best kind of knowledge to have is that which is learned for its own sake. And taught us that even the largest task can be accomplished if it is done one step at a time.

Final Approval

Panel of Examiners

- **Head of Department**
Department of Computer Science
UMT Lahore

- **Program Director (Final Year Projects)**

- **Co-Supervisor**

Acknowledgment

This project work in itself is an acknowledgement to the desperation, sincerity, passion and technical assistance contributed to it by all our group members and our talented teachers. With immense gratitude we acknowledge our indebtedness to all the persons whose support and guidance have helped us in carrying out this project work dynamically and up to the standards of our prestigious institution. We wish to express our deep respect and thankfulness to Mr. Rao Faizan Ali, our project guide, without his guidance, insightful comments, smart encouragement and valuable help this work would not have been a success. We have great pleasure in acknowledging the help we received from all those who favored in giving shape to this project, sincere thanks to: All the samples who filled out our questionnaires. The Smart people out there who invented the Internet and Google and obviously our great teachers.

Project Title	Online Shopping Store
Objective	Through online shopping Store users can easily shopping online
Undertaken by	Zubair yousaf Syed Qasim Ali Umer Ashraf Majid Zubair
Supervised by	Mr. Rao Faizan
Starting Date	10-Nov 2016
Completion Date	20-July-2017
Tools Used	HTML Bootstrap + CSS Word press Platform PHP MySQL Database Ajax JavaScript's Viso Plugins
Operating System	Environment Operating System Windows
Documentation	Microsoft Office, PDF

Abstract

An online shopping system is a system in which a customer can shopping online via internet. The online shopping system shows an online display of an order and an associated delivery window for items selected by the customer. The system accepts the customer's submission of a purchase order for the item in response to a time of submission being before the order cut off time. The online shopping system does not settle with a credit supplier of the customer until the item selected by the customer is picked from inventory but before it is delivered. Therefore, the customer can go online and make changes to the order. In addition, available service windows are presented to the customer as a function of customer selected order and service types and further, the order picking is assigned in accordance with a picker's preference. When ordering goods, many shopping systems provide a virtual shopping cart for holding items selected for purchase. Successive items selected for purchase are placed into the virtual shopping cart until a customer completes their shopping trip. Virtual shopping carts may be examined at any time, and their contents can be edited or deleted at the option of the customer. Once the customer decides to submit a purchase order, the customer may print the contents of the virtual shopping basket in order to obtain a hard copy record of the transaction.

REVISION CHART

Version	Primary Author(s)	Description of Version	Date Completed
<i>Over All Draft</i>	Syed Qasim Ali	Initial draft created for distribution	15 nov 2016
<i>Preliminary</i>	Zubair Yousaf	Second draft incorporating initial review comments, distributed for final review	15 nov 2016
<i>Final Phase 1</i>	Majid Zubair, Umer Ashraf	First complete documentation	25 Dec 2016
<i>Revision 1.1</i>	Syed Qasim , Zubair Yousaf	Revised according to suggestions.	27 Dec 2016
<i>Revision 1.2</i>	Majid Zubair, Umer Ashraf	Revised according to suggestions.	28 Dec 2016
<i>Revision 1.3</i>	Syed Qasim , Zubair Yousaf	Revised according to suggestions.	29 Dec 2016

1. INTRODUCTION

Online shopping is a form of electronic commerce where by consumers directly buy goods or services from a seller over the Internet. The purpose of this document is to define the features of the E-Commerce Website. User can view all available features and in addition to this they can purchase the products by adding them into shopping cart. Admin can manage all the contents and Orders from the Backend.
