Acknowledgement

Might want to express my appreciation and gratefulness to each one of the individuals who gave me the likelihood to finish this venture. An extraordinary because of our last year venture counsel Mr Abu Bakar Siddique and co guide Mr Asif Subhani whose help, animating proposals and encouragement, helped me to facilitate my undertaking particularly in finishing this project. A exceptional much gratitude goes to my entire fellow team member who help me to amass the parts and gave recommendation about the task.

Preface

Respectable is the mission of Prophet, selected to declare the Message of Allah, the Lord And Cherisher of all His Creation, Whose measureless Bounties incorporate the guideline of man In new and ever new learning. However, alas for man! He fancies himself independent, Turns far from the Path, and deceives others, however nothing is escaped Allah. He will bring all untruth and sin and resistance to Judgment, and curb all malevolence. The honest bow in worship to Allah, and attract closer to Him.

1. Introduction:

This project is a web application which deals with the information of plots, land and homes. It is the age of the internet so web applications are becoming very popular. User management helps in classifying and storing information about the users which helps in security of the application. There is a large number of people dealing in the process of buying and selling lands in Pakistan. It has become a big business because if you look closely there are many property dealing agents and offices in Pakistan. The main point is the reach of the information about these properties is limited to that particular area or city. People all over Pakistan and the world should be able to access this information by logging in the web application. The whole process should be automated in form of a web application so that information can be easily accessible to everyone. The web application is secure since it deals with user's management. Users can easily get registered to access information. The search of land, plots and homes is very important. Filters will be applied that will make the search process easier for the user for example they can search by commercial, noncommercial and all plots. Sellers will be able to post add about the information of the land like price, address, status etc. this add will be visible to the buyers which will be able to see the ad and interested buyers can contact that particular supplier. There are many benefits of a web application. The user interface is very friendly. The website can be published to a server than it will be ready to be viewed. Database will be secure and security is kept in mind.
